

**Fragrance Magic** is a wonderful product, but very unforgiving in how it is mixed. It will have a tendency to gel up if you do not follow these instructions:

- 1) Measure fragrance first and pour into a mixing container, such as a glass measuring cup.
- 2) Add Fragrance Magic to the fragrance in a 1:4 ratio. Example: If using 1 teaspoon of fragrance oil, then add 4 teaspoons of Fragrance Magic. If using 2 teaspoons of fragrance, then add 8 teaspoons of Fragrance Magic, and so on.
- 3) Stir fragrance oil and Fragrance Magic until mixed.
- 4) Add body spray base to the fragrance mixture and stir gently. Allow mixture to set for 5 minutes before adding any liquid color (use DWP or Planet Earth liquid colors. DO NOT use any of our liquid gel colors in body spray. It will affect the clarity level of the finished product and may settle to the bottom).
- 5) If you follow this procedure, you will have a clear spray base every time, with no clouding. In most cases, you will not need to the Solubilizer. Should you use it, NEVER add it after the Fragrance Magic has been added. It will cause gelling. It must be added when mixing the fragrance oil and Fragrance Magic. It is a 1:1 ratio (example: if you add 1 teaspoon of fragrance, you would add 1 teaspoon of Solubilizer).
- 6) Once you pour the body spray base into the fragrance mixture DO NOT add anything else, including additional fragrance. It will cause the liquid mixture to gel.
